

# CRISP

## COMMUNITY RUGBY INJURY SURVEILLANCE AND PREVENTION PROJECT

### **About the Project:**

- The community rugby injury surveillance and prevention project (CRISP) is coordinated by a team at the University of Bath and is funded by the RFU as part of the RugbySafe research strand.
- The Project aims to provide a comprehensive understanding of the injury profile of the English men's community game and inform injury management and reduction strategies.

**We are currently recruiting men's community club teams (levels 3-9) for the 2018-19 rugby season**

### **Commitment from your club:**

- Provide details on 1<sup>st</sup> XV match injuries which prevent the player from playing for one week or more.
- Provide brief information for each 1<sup>st</sup> XV match.
- Provide brief details on age, weight and height for 1<sup>st</sup> team squad players.
- Report whether your team uses the RFU-Activate warm-up

### **Benefits to your club and the game**

- You will receive a report of your season's match injuries, compared with other clubs.
- You will be making a contribution to the understanding of injury patterns in English Community rugby.
- The data you provide helps to inform coach and referee education.
